Re: Dynamic Braking for Visiport® Electric Models

Visiport® is the leading manufacturer of spin window systems worldwide offering the most comprehensive product lines. We are always looking at new technology to improve the efficiency and effectiveness of our spin window systems.

We are happy to announce in all VP220.C/C2 models the digital motor will have dynamic braking capability. This new Software feature enables the slowdown of the disc assembly when power is interrupted, rather than spinning freely without power.
